

Cybersecurity Training Diary

Day 24: Dark Web Monitoring & Threat Hunting

1. Topics Covered

✓ Dark Web 101

```
graph LR
    A[Surface Web] -->|~4%| B[Deep Web]
    B -->|Requires Auth| C[Private Databases]
    B -->|Onion Sites| D[Dark Web]
```

✓ Key Dark Web Markets

Category	Example Listings	Avg. Price
Stolen Data	Credit cards, credentials	\$1-\$100
Malware	Ransomware-as-a-Service	\$50-\$5,000
Zero-Days	Unpatched vulnerabilities	\$10k-\$1M+

✓ Monitoring Tools

- **Commercial:** DarkOwl, Recorded Future
- **Open-Source:** OnionScan, TorBot
- **Automation:** Python + Tor (stem library)

2. Key Takeaways

- ✓ **Dark ≠ Illegal:** Many legitimate uses (journalism, privacy)
- ✓ **75% dark web** is forums, not marketplaces
- ✓ **Threat actors** often reuse handles across platforms

3. Practical Exercises

♦ Exercise 1: Safe Exploration

```
# Install Tor Browser
sudo apt install torbrowser-launcher
torbrowser-launcher
```

♦ Exercise 2: Analyze Pastebin Dumps

```
import requests
r = requests.get('https://psbdmp.ws/api/search/example.com')
print(r.json()['data']) # Find leaked credentials
```

4. Questions for Reflection

- ? How should companies monitor for their data on dark web?
- ? What legal risks exist in dark web investigations?
