

Cybersecurity Training Diary

Day 23: Open-Source Intelligence (OSINT) Mastery

1. Topics Covered

✓ OSINT Framework Deep Dive

```
graph LR
    A[People] --> B[Emails]
    A --> C[Social Media]
    D[Domains] --> E[WHOIS]
    D --> F[Subdomains]
    G[Images] --> H[Reverse Search]
```

✓ Advanced Search Techniques

Operator	Function	Example
site:	Limit to specific domain	site:linkedin.com "John Doe"
filetype:	Find specific documents	filetype:pdf "confidential"
intitle:	Search page titles	intitle:"login" admin
inurl:	Search URL strings	inurl:/wp-admin

✓ Privacy Protection

- Data Removal Guides: [JustDeleteMe](#)
- Alternative Identities: [Fake Name Generator](#)
- Secure Research: Tails OS + Tor Browser

2. Key Takeaways

- ✓ Google Dorks are powerful: Combine operators for precision (`site:example.com filetype:xls password`)
- ✓ Metadata matters: ExifTool reveals hidden file data
- ✓ Automation is key: Tools like Maltego save hours

3. Practical Exercises

♦ Exercise 1: Investigate a Domain

```
theHarvester -d example.com -b google
dnsrecon -d example.com
```

♦ Exercise 2: Reverse Image Search

1. Download a profile picture
2. Use: [TinEye](#) or `python bing_image_search.py`

4. Questions for Reflection

- ? How could attackers weaponize OSINT?
- ? What ethical boundaries should OSINT researchers follow?
