
Cybersecurity Training Diary

Day 1: Introduction to Cybersecurity

1. Topics Covered

✓ What is Cybersecurity?

- Definition: Protecting systems, networks, and data from digital attacks.
- Key goals: Prevent unauthorized access, data breaches, and service disruptions.

✓ Key Terminologies:

- **Threats:** Malware, phishing, ransomware, hackers.
- **Vulnerabilities:** Weaknesses in systems (e.g., unpatched software).
- **Risks:** Potential damage from threats exploiting vulnerabilities.

✓ Types of Cyber Attacks:

- **Phishing** (Fraudulent emails)
- **Malware** (Viruses, Trojans, Spyware)
- **DDoS Attacks** (Overwhelming a server with traffic)

✓ Why Cybersecurity Matters:

- Protects personal & organizational data.
- Ensures business continuity.
- Compliance with laws (e.g., GDPR, HIPAA).

2. Key Takeaways

- 📌 Cybersecurity is about **prevention, detection, and response**.
- 📌 **Humans are the weakest link** (social engineering attacks).
- 📌 **Not all attacks are high-tech**—many exploit simple mistakes.

3. Practical Exercise

- 📌 **Task:** Identify phishing emails in your inbox.
- 📌 **Tool:** Use [PhishTank](#) to check suspicious links.

4. Questions for Reflection

- 📌 What's the most common cyber threat you've encountered?
- 📌 How would you explain cybersecurity to someone with no tech background?
